Common features of Plug-in Three-Phase Monitor Relays:
- Protects against phase loss, phase reversal, phase unbalance, undervoltage & overvoltage conditions along with rapid cycling
- Line-Line Voltage can be adjusted with power applied
- Adjustable settings for Line-Line Voltage, Restart Delay (except SSAC PMLU11), Trip Delay & Unbalance settings
- Works on 50/60 Hz only
- 8 pin plug-in with SPDT output contacts

Macromatic Advantages

- **Line-Line Voltage Range**
  The wider the voltage range, the greater the number of applications that can be supported with only one unit.

- **Line-Line Voltage Scales**
  Fewer scales that work on both 50 & 60 Hz are less confusing, easier to read and make setup straightforward.

- **Separate 120V & 575V Versions**
  Love the features and benefits of the PMPU? Get all the same for other voltage systems.

- **Adjustable Undervoltage Trip Setting**
  An adjustable range vs. fixed provides greater flexibility to set accurate undervoltage trip point & avoid nuisance tripping.

- **Fully Functional Even with Lost Phase**
  While other units may stop operating, the PMPU continues to monitor voltage & provide LED status to aid in troubleshooting.

- **Manual Reset—Works with External Switch**
  Allows the unit to be safely & easily reset from outside the enclosure with a remote button instead of opening the door and reaching in to find a top-mounted switch or button on the unit.

- **Full Fault Indication**
  Full fault indication with bi-color LED on top of unit. A dedicated color and pattern for each fault instead of only one color representing 3 or 4 faults—aids in troubleshooting.

- **Contact Ratings**
  The better the contact ratings, the greater the number of applications that can be met with only one unit & the greater the reliability of the output contacts.

- **RoHS Compliant**
  Macromatic is committed to protecting the environment.
